DISTRICTS	<b>Electric Vehicle Charging, Level Three/Direct Current Fast Chargers (DCFC):</b> Sometimes referred to as "Level 3 chargers," DCFCs use specialized, high-powered equipment that typically requires 480 V three-phase AC power. The upper range of DCFCs has been increasing, with some chargers providing 50-350 kW or more. Depending on the charger's power, the EV's power acceptance limit, and other factors, DCFCs can deliver from 60 to over 200 miles of range in 20 minutes. DCFCs enable rapid charging for long-distance trips and for charging large trucks. DCFCs cost more than Level 1 and Level 2 charging do, so many drivers limit their use of them to times when the speed of charging is important (e.g., for long-distance travel, high-value driving such as for transportation network companies [TNCs] like Uber or Lyft, or other delivery services). Most new EVs can use DCFCs; however, not all can use the highest-power DCFCs. Larger or more powerful DCFC installations may require additional electrical equipment to be installed outside the parking area, remote from the charger itself.	<b>EXISTING STRUCTURE</b> does not include a utility pole or an electrical transmission tower.
